PROFESSIONAL SUMMARY

Systems and automation-focused IT professional with 6+ years building workflows, API integrations, and automations that connect business systems and cut manual effort. Hands-on with AI-assisted development and LLM tooling — including tool-calling / MCP-based environments (Claude Code) — and disciplined about responsible, validated AI use, routinely verifying AI output against source systems. Builds REST API integrations, automates cross-system processes, and works within Microsoft and Azure environments (Entra ID identity, authentication, access controls, Power BI). Experienced handling sensitive and regulated data, documenting solutions, and partnering with both technical and non-technical stakeholders. Backed by a B.S. in Software Development.

TECHNICAL SKILLS

AI & Automation: AI-assisted development & LLM tooling (Claude / Claude Code tool-calling & MCP environments, AI-assisted coding and debugging); process & workflow automation (PowerShell, Task Scheduler); responsible AI use — understanding capabilities, limitations, and output validation

APIs & Integration: REST API integration (Jira REST API, public/third-party APIs), application-to-application data exchange, automating connections between business systems

Microsoft & Cloud: Azure / Entra ID (identity, authentication, access controls), Microsoft Intune, Microsoft 365, Power BI

Data & Security: SQL Server / T-SQL, ETL, data validation; handling of sensitive/regulated data (financial services); access & permission management

Engineering Practices: Git & version control, testing & change management, solution documentation & SOPs, multi-project management, technical & non-technical stakeholder communication

PROFESSIONAL EXPERIENCE

Software Support Engineer / Data Analyst | Aero Controls *May 2024 – Present*

- Design and maintain **automation and integrations that connect business systems** — including a cross-system workflow using the Jira REST API (with Java/Selenium and PowerShell) that ingests tickets to provision and deactivate user accounts, reducing setup from a ~20-minute manual process to a single automated action.
- Built an automated data pipeline (PowerShell) that runs SQL queries, validates results, and exchanges data between systems — eliminating ~4 hours/week (~200 hours/year) of manual work.
- Use **AI-assisted development and LLM tooling (incl. Claude Code tool-calling/MCP environments)** to accelerate building, debugging, and documentation — applying responsible-AI discipline by validating AI output against source data before it reaches production.
- Administer **Azure / Entra ID identity, authentication, and access controls** (with Intune and Microsoft 365), managing user access, permissions, and software compliance across the organization.
- Author solution documentation and SOPs, manage multiple concurrent projects, and translate business needs into practical technical solutions for technical and non-technical stakeholders, including leadership.

Software Quality Assurance Engineer | Heritage Bank *Jul 2021 – Dec 2022*

- Built automated test suites (Selenium, Python) and validated data accuracy with SQL while **working with sensitive, regulated financial data**; reduced testing cycle time 30% and defects 22%.
- Partnered with developers and stakeholders to align solutions with requirements.

Software Developer Intern | Costco Wholesale *Jan 2020 – Jun 2020*

- Built Java / Spring Boot backend features and **RESTful APIs** for high-throughput microservices.

RELEVANT PROJECTS

Fantasy Pokémon Draft Web App | *REST API, JavaScript, AI-assisted dev (Claude Code)* — Full-stack web app integrating the PokéAPI into a fantasy-draft experience; built and debugged using AI-assisted development in a tool-calling/MCP environment, with graceful handling of external API failures.

Automated Data Pipeline System | *PowerShell, Java, SQL Server, Jira API* — Automation connecting SQL data to downstream systems and ticket-driven provisioning, replacing manual workflows and improving accuracy.

EDUCATION & CERTIFICATIONS

- B.S., Software Development — Green River College, Auburn, WA (2023)
- A.A.S., Information Technology — Pierce College, Puyallup, WA (2017)
- Google Advanced Data Analytics (2025) & UX Design (2023) Certificates — Coursera
